Revanesse®

Cross Linked Hyaluronic Acid

Family of Dermal Fillers

What is the Revanesse® Family of Dermal Fillers?

The Revanesse® family of products incorporates the latest advancements in cross-linking technology, resulting in a high quality, safe, long lasting dermal filler.

Revanesse® is an injectable dermal filler that is used to smooth out fine lines and wrinkles, add volume to the lips and rejuvenate the skin, allowing you to recapture a more youthful look.

Revanesse®

The Next Generation of Hyaluronic Acid Dermal Fillers

The Science Behind the Beauty

Revanesse® is made of hyaluronic acid (HA), a naturally occurring sugar found in the skin. It is the key component of the skin's ability to hold water, and therefore stay moisturized.

The HA used in the Revanesse® family of products is obtained through non-animal sources, making it safe for medical use. It is then put through a bonding process called cross-linking to make it more durable so that it lasts for several months, before being harmlessly broken down and absorbed by the body. Revanesse® uses the highest concentration of HA available for maximum durability, and an advanced cross-linking process for a smoother texture, ensuring natural looking results that last.

Safe and Effective

In the past few years, cross-linked HA has become the most popular type of dermal filler. HA is naturally present in the skin as it is vital for tissue hydration and elasticity.

The Revanesse® line of fillers employs our Thixofix™ Technology – one of the most advanced methods of cross-linking available – thereby ensuring long lasting results. This patented process also greatly reduces post injection swelling for a truly "down-time" free procedure.

Revanesse® does not require a skin pre-test as it is free of all animal products. It is naturally integrated into the tissue leaving your skin with a perfectly healthy and natural look. Because Revanesse® is a non-permanent filler it allows you the opportunity to reassess your needs and alter or continue treatment as desired.

Restore your skin to a more youthful state

Now You Have a Choice...

There are a total of six fillers in the Revanesse® family to better suit your needs.

Revanesse® Pure
Revitalisation Implant

Revanesse® Pure does not act like traditional fillers that fill-in individual creases or wrinkles. It instead helps to nourish and moisturize the entire surface of the face, creating healthier looking skin. Revanesse® Pure can be used on the hands, neck, and chest area.

Because Revanesse® Pure actually helps to repair your skin, the results can be long lasting. It will not, however, stop the aging process, so additional treatments at a later time may be necessary to maintain its effects. Follow ups will require less treatment as the skin will be in a better condition than it was originally.

Revanesse®
Cross Linked Hyaluronic Acid

Revanesse® is a clear, regular viscosity filler that is best suited to fill in smaller lines and wrinkles such as forehead wrinkles, lines around the lips and small laugh lines. Revanesse will give you natural looking results for approximately 6 months.

Revanesse® Ultra

Cross Linked Hyaluronic Acid – *High Viscosity*

Revanesse® Ultra is a high viscosity filler that is made to be a thicker and longer lasting gel. It is ideal for medium to deep wrinkles and folds (such as smile lines) and provides long lasting results – typically 9 to 12 months depending on the injection site.

ReDexis®

Cross Linked Hyaluronic Acid With Dextranomers

ReDexis® is an HA filler with a unique ingredient, which gives it the ability to generate new collagen. The key ingredient in ReDexis® are Dextranomer Beads (a glucose derivative) which attracts collagen to the injection site. The collagen binds together to form new tissue, providing augmentation even after the HA in ReDexis® has been absorbed. ReDexis® is ideal for smoothing out deep wrinkles and folds, and will last approximately 12 to 18 months.

Revanesse® Lips

Cross Linked Hyaluronic Acid

Revanesse® Lips* is specially formulated for lip augmentation and for creating definition of the lips. The result of this special design is a filler which produces fewer incidences of swelling. Results typically last around 6 months.

*** Not yet available in Canada**

ReDexis® Ultra

Cross Linked Hyaluronic Acid With Dextranomers

ReDexis® Ultra is a very high viscosity HA filler with Dextranomer Beads. It offers long lasting results that are ideal for creating or restoring lost volume in areas such as the cheeks or the chin. An increased amount of Dextranomers ensures maximum collagen production. Results with ReDexis® Ultra will last approximately 18 to 24 months.

Protect fragile areas of the skin from ageing

A safe and natural filler for smoothing out wrinkles and regenerating the skin...

Augmentation & Regeneration

Dextranomer Beads are a key ingredient in ReDexis® and ReDexis® Ultra. They are cross-linked dextran (sugar) beads which are positively charged. These beads attract naturally occuring GAG and Collagen (soft tissue) to the injection site, providing long lasting natural results. ReDexis® and ReDexis® Ultra will not only act as a 'filler', but will actively regenerate the body's own collagen. The result is a long lasting, regenerative, highly biocompatible and natural filler.

What are ReDexis® & ReDexis® Ultra?

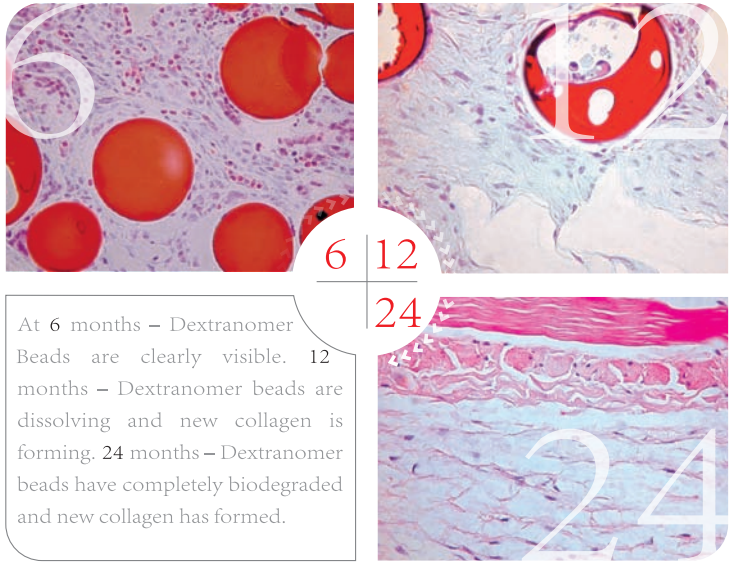
As a quick treatment, ReDexis® is perfect for anyone seeking more youthful looking skin. It will not only add volume and smooth out imperfections, but will also regenerate the dermis with its revolutionary blend of cross-linked HA and Dextranomer Beads. Ideal candidates for ReDexis® are women and men looking to smooth out any deep lines or folds in the face.

ReDexis® Ultra is a long lasting, fully absorbable dermal filler for creating and shaping facial contours. Its enduring results are ideal for women or men have have lost or are starting to lose volume in their mid-face (cheek and temple area) or for those who want to enhance their facial contours by augmenting their cheeks or creating a defined chin. ReDexis® Ultra can be used in conjunction with, or as an alternative to a traditional face lift with minimal “down-time”.

Renews and regenerates the skin for long lasting beauty.

The Advantage of ReDexis®

ReDexis® has been shown to regenerate Collagen. After a few months, the Dextranomer Beads start to dissolve and new Collagen is formed.



At 6 months – Dextranomer Beads are clearly visible. 12 months – Dextranomer beads are dissolving and new collagen is forming. 24 months – Dextranomer beads have completely biodegraded and new collagen has formed.

Benefits of the Revanesse® Family

- **Immediate and long lasting improvement**
- **Minimally invasive and easy to perform procedure**
- **Create balance and symmetry in the face**
- **Ability to create or restore volume in the face**
- **Enhance and augment facial features**
- **Safe and proven results**
- **No "down-time"**
- **Ability to regenerate soft tissue**

No commitment required.
Continue your treatment as desired.

What You Need to Know

Before Your Treatment:

Make sure that make-up and all other cosmetics are removed, and that your skin is clean. This can be done using an astringent or facial cleansing lotion. Use cold water to ensure that your pores are not dilated. It is strongly advised that you do not take any anti-inflammatory drugs (Aspirin, Advil etc.) at least 3 days prior to your treatment as they may increase swelling or bleeding at the injection site.

After Your Treatment:

After you are treated with any of the Revanesse® products, try to keep your face relaxed by not making any highly expressive facial movements. It is not advisable to be exposed to extreme heat (e.g. sauna, tanning bed, etc.) for at least 2 weeks after the treatment as it may reduce the longevity of your treatment. It is also not advisable to massage the area injected unless instructed to do so by your physician. You can begin to re-apply make-up the day after your treatment.

Get on with your daily activities with minimal down time.
